

Salima Fine French Beans

Developed by Pro-Seed cc South Africa

Outstanding qualities

- [high yield potential
- [good disease resistance
- [Attractive, straight, dark green, shiny pod

Salima has been developed as a fine bean for the pre-pack market. It has been bred in Africa for african conditions. Salima yields a very attractive straight bean, with a shiny green colour. The uniformity of the beans is excellent. The field holding ability of Salima good and seed development is slow. Salima pods store well under cold conditions and do not turn brown. Disease resistance and vigorous growth are good and top yields can be expected.

Characteristic	Salima
Type	Extra fine to fine
Maturity	60-65 days
Growth Habit	Upright bush
Pod colour	Dark green, shiny
Pod length	12-14 cm
Pod diameter	6-8 mm
Pod cross section	Round
Seed size	Around 17 g per 100 seed
Seed colour	White
Pod appearance	Long and fine with a dark green colour
Use	Fresh market and pre-packing, keeps well in cold storage
Special features	Excellent yield potential and quality
Disease Reaction	Good resistance to bean common mosaic virus, rust and agular leaf spot
Fertilizer Guide	N-40 to 60 kg, P-15-25 kg, K- 50-70 kg per ha (This is only an indication and nutrient status should be taken into account
