

# Sibaya

## Fine French Bean

### Outstanding qualities

- High yield potential
- Good disease resistance
- Attractive, straight, dark green, shiny pod
- Pods very uniform in size and appearance

Sibaya has been developed as a fine bean for the pre-pack market. It has been bred in Africa for African conditions. Sibaya yields a very attractive straight bean, with a shiny green colour. The uniformity of the beans is excellent. The field holding ability of Sibaya good and seed development is slow. Disease resistance is good and high yields can be expected.

Characteristic	Sibaya
<b>Type</b>	Extra fine to fine
<b>Maturity</b>	60-65 days
<b>Growth Habit</b>	Upright bush
<b>Pod colour</b>	Dark green, shiny
<b>Pod length</b>	12-14 cm
<b>Pod diameter</b>	6-8 mm
<b>Pod cross section</b>	Round
<b>Seed size</b>	Around 17 g per 100 seed
<b>Seed colour</b>	White
<b>Pod appearance</b>	Long, straight and fine with a dark green colour
<b>Use</b>	Fresh market and pre-packing, keeps well in cold storage
<b>Special features</b>	Excellent yield potential and uniform pods
<b>Disease Reaction</b>	Good resistance to bean common mosaic virus, rust and angular leaf spot
<b>Fertilizer Guide</b>	N-40 to 60 kg, P-15-25 kg, K- 50-70 kg per ha (This is only an indication and nutrient status

**Disclaimer:** This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the McDonald Seeds Pty) Ltd Conditions of Sale before ordering seed.

**Resistance:** is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).

\* **Experimental:** This variety does not appear on the current South African Variety list, but has been submitted for registration.

**Recent version:** Kindly contact McDonald Seeds for the most recent version of this Technical Bulletin.
